

Rapid Response/On Call System

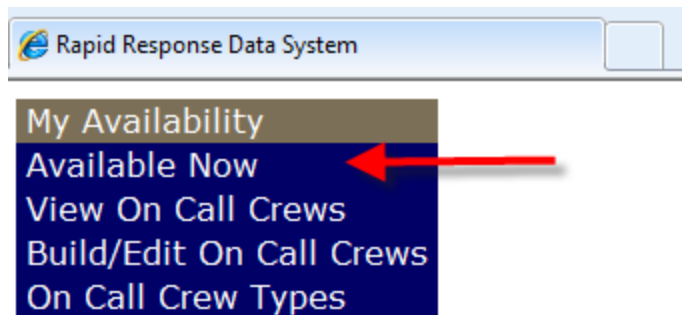

v0.5 Release Notes

Accessing the System:

<http://asp.gebhart.ca/RapidResponse>

Note, there is no “www” in there. I’ve tested it with Internet Explorer, and if you try other browsers, please let me know if they work.

Step 1: Entering your Availability

Click on the “My Availability” in the menu at the top of the screen, then enter your CAPID in the box where indicated and click the Get CAPID button:

A screenshot of the "My Availability" menu with the "Available Now" option selected. Below the menu is a text input field labeled "CAPID:" and a button labeled "Get CAPID".

The screen will, within a few seconds, fill with various information about your CAPID, including contact details, and qualifications that you may have:

CAPID: 477407

- 1: Here you can enter weight information about your flight bag and overnight bag. These will be used in a future version for AOBDs and FROs to be able to pull Weight & Balance for aircrews automatically. It is, at present, optional to fill this in.
- 2: Here, you can add a new airport, along with distance and time to travel to the airport for you in normal circumstances. These numbers will be used to determine which crews can respond in the same amount of time to a critical situation. This information is required, so click on the Add New Airport button, and fill in the information.
- 3: This is the contact information pulled out of our database that is received from eServices. If you have a CAP Radio, you might want to add that information into eServices in your contact info screen there so it will be available. Don't expect it to show up instantly, there is a manual process where we dump the data from eServices from time to time to make it available here.
- 4: These are your current ES Quals, including a status of "Active", "Training" or "Expired". Again, this data is not real-time, but subject to a dump from CAPNHQ.

5: Availability Calendar: This shows when you are available. A green day means you are available the entire day, a yellow day means you are available part of the day, and White/Grey means unavailable at all.

6: Edit Availability: Enter your start/end dates and start and end hours (0-23) and either Add or Remove availability to modify your availability.

For example, if you are available the entire month of January, except for the 17th, put in a Start Date of 1/1/11, a Start Hour of 0, an end date of 1/31/11, an end hour of 23 and click Add Availability. Then put a start date of 1/17/11 and an End Date of 1/17/11 (it will keep the 0 and 23), then "Remove Availability".

7: Hours Available: Based on the "Selected Day" in the calendar, this will show which hours (from 0-23) you are marked as available on that day.

That's pretty much it for Step 1!

Step 2: Available Now

The information you just entered isn't much good if you can't search it! That's the purpose behind the Available Now option.

Dec	January 2011						Feb

- 1: Select your date. It defaults to today
- 2: Select your airport. Only airports that have people associated with them (from the My Availability) will appear here
- 3: Select the Qualifications you're looking for. If you need someone to act as an AOBD, select that. There are also "Quick Selects" (#5) that will select common groups of quals. You can select multiple by using "Ctrl-Click"
- 4: Select Search, at this point the list of available resources (#6) will appear
- 5: Quick Selects will select specific qualifications. Flight Crew will select MP, MO, MS. Base Staff selects: IC1, IC2, IC3, OSC, PSC, AOBD, GBD

- 6: This displays the results of your search
- 7: To receive details (including Quals, hours available, and contact information), select one of the Details buttons

There you go, you found yourself an available AOBD for your mission. You also have instant access to contact information for your individual.

Step 3: On Call Crews

You may notice the bottom two options on the menu are not selectable. They're not quite ready for prime-time. They work, but it's really easy to mess stuff up in them, so I've locked them out for the moment (coming soon). These options allow for searching for available crew members over a longer time period, and assigning them to On Call Crews. The View On Call Crews option lets you see what has been entered.

- 1: Select the crew you would like to view. If you need an air crew out of TYS, select the TYS-Air Crew 1. Multiple crews can be defined in the system, and each crew can have different qualifications required. These are editable in the locked-out options.
- 2: The individuals, along with the times they are "on call" and the role they are designated on the crew, will show up here. In this case, we have a two-person crew, one designated as PIC, the other as Observer.
- 3: Select an individual crew member, and their contact details will show up below the calendar.
- 4: You can look at other days to see who is on-call when on those days.
